

TP14J 140MM TEST PEN(ORANGE)

instructions

The TP14J Test Pen is a portable testing tool used to detect voltage within electrical circuits. It is typically employed in residential, commercial, and industrial settings to ensure the safety and reliability of electrical circuits.

Voltage Detection: The TP14J Test Pen can be used to detect both alternating current (AC) and direct current (DC) voltages. It measures the voltage within a circuit to determine the presence of electrical current.
